

SlikTite Steel

FIELD OF APPLICATION

SlikTite Steel is a graphite free mudding compound designed for use by steel foundries but applicable to all metals. The paste has a workable consistency with enough lubricant to allow an even and smooth application to core/mold surfaces. This product dries to a hard surface without shrinking or cracking.

PRODUCT CHARACTERISTICS

Physical Form	Paste
Paste Penetration (mm)	194 – 216

PROCESSING / NOTES ON USE

As with most mudding compounds SlikTite Steel is designed for hand application to core and mold seams or voids. It has enough lubricity to allow a smearing application without lifting from the core or mold surface.

TRANSPORT AND STORAGE

The shelf life for SlikTite Steel is 90 days. For optimum performance avoid temperature extremes during storage and do not allow to freeze. Partially used containers should be tightly closed to prevent contamination and further evaporation of liquids.

Attention!

HAI does not guarantee a definitive expiration date, as the functional life of many products depends strongly on storage conditions.

HAI recommends the application of FIFO (First In First Out) practices and inventory strategy for all HAI foundry products.

SAFE HANDLING

Chemically resistant gloves and eye protection should be used when handling or using mudding compounds. SlikTite Steel contains petroleum hydrocarbons that may be irritating to skin, eyes and mucous membranes, use of appropriate PPE recommended. Review MSDS before using. Please refer to the Material Safety Data Sheet for additional information.
